- **Online ambulance application**

The purpose of this project will fill the gap between the patient and ambulance response time. Ambulances are a vital part of emergency medical services. Usually, patients have a finite range of ambulance contacts; thus whenever in an emergency, they find difficulty.

- **Bike rental system**

Bike rental system deals the bike renting services for particular days. In this project the customer and Admin, where customer is also known as user and rental service act as information of bike which is allocated to user. Admin monitors bike rentals and manages four sections they are:-

1. Customers details
2. Bike details
3. Rent details
4. Transaction details

- **Semlin language learning app**

Semlin app extracted as semantic linguistic app. It is a language learning application for different languages. It provides users with comprehensive and immersive language learning interface and a wide range of features and aims to facilitate language acquisition for learners.
